		THREE PLACE DECIMAL \pm	COMMENTS: It is best to line up the axle brackets by first putting the motors in the motor brackets, sliding the axle through one motor, sliding the axle brackets onto the axle, then sliding the axle through the other motor. Screws that hold the ingot counterweight on are woodscrews #8 1.75", and the ingot position may need to be adjusted so it does not collide with the wheel.			A	Layla Bottom
